Aidan Baker p.s. I had a lot to write about this, one pager made me shorten a lot of it.

Overview: **Saloon Shootout** is a 2D first-person gunslinger aim trainer set in an Old West saloon. It takes inspiration from arcade shooting games and GunBlood. At the start of each round, the mouse must be placed over the holster. After a random delay, DRAW! appears and outlaw targets pop up around the saloon. The player must draw, aim, and shoot them as quickly as possible. The revolver has 6 bullets. Body shots earn 100 points and headshots earn 200 points. There are 6 rounds, starting with 1 target and increasing to 6. The player must hit every target before running out of bullets, making each round less forgiving. If not they lose.

Controls: Mouse: Draw and aim, Left Click: Shoot, Menu: Maybe select holster position and menus

Art Assets: 2D saloon background, cowboy targets, revolver/holster, crosshair, muzzle flash, bullet icons, and UI.

Audio Assets: Revolver shot, enemy death, target hit, and DRAW sound.

Game Flow: Menu → Choose Holster → Wait → DRAW! → Shoot Targets → Results → Next Round → Final Score

Challenges: The main challenges will be creating a smooth drawing mechanic, detecting head or body shots, and spawning targets without overlap. Targets will not shoot, keeping the project way easier on me.
